

Vertical Slider

Elegant traditional style

Definition: A Vertical Slider or Sash Window features 2 sashes which slide past each other and also tilt inwards for ventilation. This style was originally found in properties dating from the Georgian period, right through to the 1920s.

Our Vertical Slider system combines classic style with modern benefits. Vertical Sliders perfectly complement period properties, but beneath the surface they have been brought bang-up-to-date with the kind of advanced technology VEKA is known for worldwide.

Sash horns can be added to this popular window style for a more traditional appearance and are available in either clip in or run-through options, your installer will be able to help you choose what will best complement your property.

Don't forget that whilst Vertical Sliders are commonly associated with period properties, they also look great on newer homes – adding a touch of class and allowing your individuality to shine through.
